

Dustin Getz is a distinguished UI platform engineer, open source leader and independent software developer.

- full stack web applications in JVM ecosystem & tech debt modernization specialist
- backend: Java, Clojure, Scala, Haskell, relational and graph databases
- frontend: TypeScript, ClojureScript, React.js, TanStack, HTMX, signals, sync engines
- research interest: functional effect systems, differential dataflow, hypermedia

Consulting history – full stack web applications, UI platform, JVM backends

- **Ladder Life** (2025), Series D fintech \$196M raised. I led a modernization effort to shift their legacy **Clojure/Script** UI platform to **TypeScript/React**. Also **Datomic** perf optimizations, **CICD** modernization, **Buck/Bazel** monorepo build maintenance.
- **Multiply.co** (2024), Seed startup. Notion-like AI product for marketing domain, I developed their UI sync infrastructure for their AI technology. **Clojure/Script**.
- **Seaquent Labs** (2023), industrial robotics SaaS vendor. Developed realtime robotics visual studio UI MVP. **Java**, **ClojureScript**, **3D rendering**, **React**.
- **NewWave** (2020–22), a Medicaid federal system integrator. I was responsible for delivery of a data warehouse cloud analytics product in the Medicaid space from concept to commercialization and first two sales. **Python + GCP data stack**, **Java**, **TypeScript**, **React**, **Looker**, mainframe integrations, emphasis on testing/QA for correct analytics, security (HIPAA, NIST SP 800-53b, etc)
- **Swing Education** (2019–20), Series C startup. **Clojure/Script**, **Datomic**, **JavaScript**. I built their internal enterprise workbench application to manage their logistics heavy business processes.
- Pre-seed startup, geolocation social media app, **React**, **JavaScript**, **Rails**
- Cryptocurrency web3 startup, **ClojureScript**, **React**
- Cloud teleconferencing startup. **React**, **JavaScript**
- **Wingspan** (2010–14) – UI tech lead for Pharma reg compliance workbench app. **Java**, **Scala**, **JavaScript**, **React**

Tech talk highlights

- [Differential Dataflow for UI](#) @ LambdaConf (KEYNOTE) (2025)
- [Compiler Managed Datasync for Rich Web Apps](#) @ London Clojurians (2023)
- [UIs are Streaming DAGs](#) @ Hytradboi (2022)
- [Functional Programming on the Frontend with React.js](#) @ QCon NYC (2014)

Github work samples

- [Electric Clojure](#) (2000 github stars) is an experimental solution to the frontend/backend sync problem in user interfaces. Electric applies database incremental view maintenance techniques, such as differential dataflow, to the domain of user interfaces.
- [Hyperfiddle](#) is UI platform infrastructure for JVM backend teams. An easy way to get an enterprise UI for any function or object without writing any REST APIs.
- [React Cursor](#) (1000 github stars) the very first React state management library way back in 2014, this was used by dozens of companies adopting React.
- [Wingspan Forms](#) the very first enterprise forms library for React way back in 2013.

Testimonials

"Dustin is amazing, he takes care of everything and the communication is perfect"
— Greg, EVP State and Health Business

"I haven't seen anyone here that has the capability you bring to the table"
— Jay, Managing Director

"The speed with which this application came together is just mind boggling"
— Series B healthcare CTO

"You do the work of four men. I've heard a lot of talk in my career in Silicon Valley but I've never seen anyone deliver like you."
— Ken, CEO

"Dustin is just relentless ... more dogged than any entrepreneur I've seen"
— S, Investor

"Whatever Dustin is doing, he's going to be successful"
— Garth, CEO
